*Arteries, Etiology, Diseases.

The statistical study of the incidence of arteritis in
6,000 diabetics shows a doubled incidence of arte-
ritis in diabetics treated with insulin. Analysis of
this increase shows that the frequency of arteritis is
directly related to the dose of insulin required. This
is not due exclusively to the prolongation of life or to
the severity of the diabetes (the increase is apparent

With the appearance of antibiotics, the difficult problem of preoperative sterilization of the intestine in surgery of the colon appears to have been solved. Bitter disappointments followed this enthusiasm. However, later in connection with the constantly broadened scope of antibioticotherapy it is possible to resort successfully.
